

# BILLET LUG NUTS

**Made In USA**

Thank you for purchasing Champion Wheel billet lug nuts

## Helpful Tips:

- Make sure stud threads are clean and not damaged
- Apply a small amount of anti-seize or thread lubricant to prevent gaulding
- Start nuts by hand to prevent cross-threading.
- Ensure studs have at least 1.125" of thread protruding beyond the face of the wheel center to ensure proper engagement of the lug nut when fully torqued (see photos below).
- No washer necessary due to oversized flange
- Do not over torque

Recommended torque:

5/8"	100 ft/lbs
1/2"	85 ft/lbs
12mm	85 ft/lbs
7/16"	85 ft/lbs
